

Plan Ahead to take Advanced Placement Classes in High School

Why should YOU take an AP class?

- You would have more time to learn the same amount of material as in college.
 - High School = 5 days a week for over 30 weeks
 - College = 2-5 days/week for 15 weeks
- You would most likely have a smaller class than if taking the same course in college. Smaller class size means more time can be dedicated to YOU.
- You would have serious, dedicated teachers here at Fort Recovery who truly want the best for YOU. Your class would not be taught by a TA, or teaching assistant, who typically is a student working as an aid for a professor.
- Taking AP classes while still in high school will show colleges and future employers that you are a serious student who knows how to set and keep high standards.
- You will be better prepared for college – not just in the subjects you have chosen to take as AP classes, but also in knowing how to study for rigorous college level classes.
- You may test out of lower-level courses when entering your chosen college. (You can test out of lower-level courses by either passing the AP Exam OR by earning a high enough score on a college placement exam.) This translates into saving money and time in college.

What Advanced Placement Classes are offered here at Fort Recovery?

- AP Biology
- AP Calculus
- AP Chemistry
- AP Literature & Composition
- AP World History

What do you need to do to plan ahead to take AP Classes here at Fort Recovery?

- Learn the basics well in pre-requisite classes. That simply means that you should give your middle school, freshmen, and sophomore level classes your best effort so that you are well prepared for the challenge of an AP Class as a junior or senior.
- Take Algebra I in 8th grade (in order to take AP Calculus as a senior).
- Take Chemistry in order to prepare you for AP Chemistry.
